

## Data Sheet

### Conductive Plastic Tweezers

Code: **CCL/BEBP/01**      **10mm Stud**  
         **CCL/BEBP/02**      **4mm Stud**

Manufactured from a Flame Retardant ABS/PC blend to provide excellent physical and aesthetic properties, this new ESP Bonding Plug provides a safe ESD earth facility containing an integral 1.1meg ohm resistor between the earth pin and 10 mm contact stud on the 01 version and 4 mm contact stud on the 02 version.

These ESP Bonding Plugs are designed for use with all suitable 3-pin socket outlets

### Design Details:

The contact stud is raised away from the surface of the plug enabling the user to remove the connecting earth lead without pulling unnecessarily on the socket lead head by virtue of the space created for the fingers to grip more effectively.

This feature is aimed at ensuring the product is more user friendly and also reduces wear and tear on the earth leads. The lip around the perimeter of the plug provides excellent grip when removing the plug from a socket, again an attempt to improve user friendliness plus helping to prolong the product's life by ensuring it can be easily used.

The ESD Bonding Plug also has an ESD logo incorporated into the top cover adding to the user awareness of the problems of static protection. This ESP Bonding Plug is rugged and durable, and is essential in any work place where static protection is required and accordingly is supplied in the industrial recognised colour of yellow
